LIFESCORE

India's First Holistic Life Benchmarking & Elevation Platform

Co-Founder Vision Document — Version 3

Confidential | March 2026

"Know where you stand. Know what to do. Watch your life improve."

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

01 Executive Summary

LifeScore is a mobile-first platform that gives every Indian a single, personalised dashboard showing exactly where they stand — financially, professionally, and physically — compared to real peers of the same age, city, income bracket, and industry. Then it tells them, with precision, exactly what to do about it.

The One-Line Pitch

"Think CIBIL Score meets LinkedIn Premium meets Apollo Health Check — combined with a GPS that recalculates your life route in real time. Built for India, for the individual, for the first time."

India has 500 million working-age adults. Most of them have a nagging sense that they might be behind — saving too little, growing too slowly, sleeping badly, gaining weight. Yet no product tells them the full truth, and no product tells them what to do about it in one place. LifeScore changes both.

500M	24%	26.6%	0.8%
Working-age Indians	Financially literate	Physically fit	Gym penetration rate

This document covers: the full problem landscape, what exists and why it fails, the complete product architecture (4 pillars), LifeScore Elevate — our AI-powered action layer, the 1-month MVP plan, the 5-year roadmap, business model, and everything we learned from deep-diving the Indian fitness, career, and financial crisis in our research phase.

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

02 The Problem

Three simultaneous crises that no single product addresses

2.1 The Financial Crisis

India is experiencing a silent savings collapse that most people feel but cannot measure:

Financial Crisis — Key Data

Household savings as % of GDP: collapsed from 11.5% (2020-21) to just 5.1% (2022-23)

Household liabilities: risen to 6.4% of GDP — near a 17-year high

Credit card defaults: 28% of users cannot pay even one month's bill

Only 24% of Indian adults are financially literate

Less than 6% of India's population invests in mutual funds despite digital access

Nearly 50% of Indian households have zero emergency savings

74% of Indians contribute only 1-15% of salary as retirement savings

43% of Indians under 25 want to retire between 45-55 — yet are saving nowhere near enough

The core problem is not information — it is behaviour. Every March, millions of Indians panic-buy random ELSS funds. Savings accounts yield 2.5-3.5% against 5-6% inflation, meaning money in the bank is literally shrinking in real terms — but most Indians don't feel this because the nominal number keeps going up. India's middle class salary has grown at just 0.4% CAGR over the past decade in real terms. The system is working against people, and nobody is showing them the numbers.

2.2 The Career Crisis

Career Crisis — Key Data

17% of Indian employees cite self-motivation as the biggest career growth barrier — highest globally

24% believe they must change employers to progress — highest in Asia-Pacific

84% of Indian professionals are upskilling — but 46% self-fund with zero guidance on what the market rewards

India's employability rate dropped to 42.6% in 2024 despite record self-directed learning

63 in every 100 Indian workers will require retraining by 2030

Indian professionals spend 1.5x the global average on upskilling — and get less career traction from it

The paradox: Indians are spending more on upskilling than anywhere else in the world — and getting less career traction from it. The reason is structural: they are learning the wrong things, in the wrong sequence, with no connection to what the market actually rewards right now. There

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

is no product that tells an Indian professional: 'Here is your exact salary percentile, here is why your career is moving at this velocity, and here is the single skill that would move you from the 40th to the 70th percentile within 18 months.'

2.3 The Health Crisis

Health Crisis — Key Data

55% of Indians sleep past midnight. 40% sleep fewer than 6 hours per night

Work-related stress keeps 45% of respondents awake at night

Only 26.6% of Indians are physically fit by standard metrics

India has just 12.3 million gym members — 0.8% of adults. The US: 25%. Brazil: 7%. China: 3%

72% of urban Indians recognise the benefits of exercise — but most don't do it

Lifetime diabetes risk for a 20-year-old Indian: 55.5% (men), 64.6% (women)

Fitness apps retain only 4% of users by Day 30. 96% quit within a month

52% cite price as the #1 barrier to fitness. Yet most gym apps recommend only expensive options

2.4 The Invisible Connection — Why All Three Must Be Solved Together

This is the insight that competitors will never find because they each solve only one dimension. The three crises are deeply and causally connected:

The Vicious Cycle

Financial Stress -> Elevated cortisol -> Poor sleep -> Lower cognitive output

Poor sleep -> Lower productivity -> Slower career growth -> Salary stagnation

Salary stagnation -> Higher financial anxiety -> Worse health decisions -> Lifestyle disease

Lifestyle disease -> Future medical costs -> Retirement gap -> More financial stress

Professionals in high financial stress take 40% fewer career risks.

Professionals who exercise 4x/week earn 18% more within 3 years on average.

Every 1 hour of additional sleep improves cognitive performance by 18% within 2 weeks.

LifeScore is the only product positioned to see this entire loop and intervene at the right point.

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

03 What Exists Today

The fragmented landscape and its structural failures

3.1 Financial Tools

Product	What It Does	Critical Gap
INDmoney / Fi / ET Money	Tracks personal spending, investments, portfolio	No peer comparison. No benchmark. No verdict. Just your own numbers in a vacuum.
Groww / Zerodha / Paytm Money	Investment platforms with portfolio tracking	No savings rate benchmarking. No financial health score. Tool, not advisor.
CIBIL / Experian	Credit score only	No wealth, savings, insurance, or investment context. One dimension only.
Banks (HDFC, Axis, SBI)	Balance and transaction history	Siloed, no cross-institution view, no peer benchmarking, no action.

3.2 Career Tools

Product	What It Does	Critical Gap
AmbitionBox	Salary data, company reviews, in-hand calculator	Data skewed toward pre-COVID numbers. No career velocity or skills gap analysis.
6figr	AI-driven salary benchmarking	Limited industries. No career trajectory. No actionable insights beyond the number.
IndiaTechSalaries	Tech-sector salary data	Tech only. No career trajectory. No crossover with financial or health data.
LinkedIn Premium	Job market intelligence, profile visibility	US-centric. No India-specific benchmarking. Expensive. No action sequencing.
Glassdoor / PayScale	Salary ranges and company ratings	Global tool not optimised for Indian CTC vs in-hand structures. Passive, not prescriptive.

3.3 Health & Fitness Tools

Product	What It Does	Critical Gap
HealthifyMe	Calorie tracking, AI nutrition coach	Tracks vs. your past self. No peer context. No financial awareness in recommendations.
GOQii	Fitness tracking with live coaching	No financial or career integration. No benchmarking engine. Expensive.

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

Cult.fit	Fitness classes and health content	Offline-first, metro-centric. Doesn't know if the user can afford it.
Fitbit / Apple Health	Wearable data aggregation	No India-specific peer cohorts. No actionable insight. Data collection, not elevation.
Wysa / YourDost	Mental health support (reactive)	No integration with lifestyle factors. Reactive, not preventive.

The White Space — What Nobody Does

No product in India today:

-> Combines financial + career + health benchmarking in one place
-> Shows your percentile rank among real peers (same age, city, income, industry)
-> Tells you WHAT YOU ARE DOING WRONG across all three simultaneously
-> Surfaces the causal connections between the three dimensions
-> Recommends the single highest-leverage action this week — across all pillars
-> Is built natively for Indian data, CTC structures, and cultural context
-> Recommends fitness activities calibrated to your actual budget and geography

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

04 What We Build

Four pillars, one engine, one score

4.1 Pillar 1 — Financial Score

Inputs: monthly in-hand salary, savings rate, EMI obligations, insurance coverage (health + term), investment portfolio, emergency fund, city. Outputs: savings rate percentile vs. age/city/income cohort, net worth trajectory, debt-to-income ratio vs. cohort, insurance adequacy flag, plain-English verdict with one priority action.

Financial Failure Mode	Root Cause	LifeScore Intervention
The Lifestyle Inflater	Salary grows 10%, spending grows 12%. Gap widens silently.	Shows spending growth rate vs. income growth vs. peers. Makes the invisible gap visible.
The Panic Investor	Rushes into tax-saving in March. Emotional decisions.	Year-round tax calendar with month-by-month prompts. Removes the panic moment.
The Underinsured	No term or inadequate health cover — India's #1 hidden risk.	Insurance gap calculator. Shows exact rupee cost of being uninsured if hospitalised.
The FD Trapper	Keeps money in FDs. Feels safe. Real returns are negative.	Shows inflation-adjusted real return vs. what peers earn. Makes the invisible loss visible.
The Retirement Dreamer	Wants to retire at 50. Contributing 8% of salary.	Retirement calculator: 'At your rate, you retire at 71. Here is what changes that.'

4.2 Pillar 2 — Career Score

Inputs: role, company type, industry, city, years of experience, educational background, key skills, last 3 appraisal hikes. Outputs: salary percentile for exact role + YoE + city, career velocity score, skills gap alert, switching signal, lifetime earnings impact of current trajectory.

Career Failure Mode	Root Cause	LifeScore Intervention
The Underpaid Stayer	In same role 3+ years. 20-30% below market. Doesn't know it.	Real-time salary percentile. 'You are at 31st percentile. Here is your negotiation anchor.'
The Wrong Course Buyer	Spends Rs.40,000 on cert that doesn't move the needle.	Shows which skills correlate with salary jumps at their specific next level and industry.

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

The Frozen Switcher	Knows they should switch. Doesn't know if timing is right.	Job Switch Signal Index — market demand score + salary negotiation anchor based on peer data.
The Invisible Performer	Does great work. Never builds external visibility. Misses promotions.	Profile completeness score + external visibility score + specific prompts to fix it.
The Skill-Experience Mismatch	Strong experience, weak market-signal skills.	Skills gap map showing exact delta between their profile and top 25% of their cohort.

4.3 Pillar 3 — Health Score

Inputs: sleep hours, daily steps, exercise frequency, BMI, blood pressure and glucose (from last checkup), stress self-rating, diet type. Syncs with Apple Health and Google Fit for passive data. Outputs: health percentile vs. age/gender/city cohort, longevity risk flag, sleep quality score, mental wellness trend, priority health action.

4.4 Pillar 4 — ActiveMatch

ActiveMatch is the gym, sport, and activity recommendation engine built on top of the Health Score. It is India's first fitness suitability engine — one that accounts for psychology, geography, finances, and health simultaneously. Every other fitness app asks: 'What is your goal?' ActiveMatch asks: 'What can you actually afford without hurting your savings rate? What does your health data say your body needs most? What is realistically available within 3 km of you? What fits your schedule?'

Dimension	What It Uses	How It Recommends
Financial Fit	Financial Score + savings rate	Calculates a Fitness Budget. Never recommends spending that would worsen savings rate. Always shows a free alternative.
Health & Body Fit	BMI, BP, sleep score, stress score	High BMI -> swimming over HIIT. High stress -> yoga over CrossFit. Diabetes flag -> resistance + post-meal walking.
Geography & Availability	Pincode + GPS + city tier	3km radius for everyday options. 10km for specialist facilities. Tier-aware — no suggesting CrossFit in Tier-3 cities.
Schedule & Energy Fit	Work hours + sleep data	Night shift worker gets different timing than 9-to-5. High-stress professional gets lunchtime walks over 6am HIIT.

The ActiveMatch Moat

ActiveMatch is not a feature a competitor can easily copy.

It requires the unique combination of financial, health, and professional data to work.

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

A gym recommendation app without knowing the user's savings rate will always recommend what the gym pays it to recommend.
LifeScore's recommendation is the only one in India structurally aligned with the user's actual best interest across all dimensions. This trust is the product's deepest moat.

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

05 LifeScore Elevate

From mirror to GPS — the AI-powered action engine

5.1 The Philosophy

The Mirror (benchmarking) earns trust. Elevate delivers transformation. The product has three modes:

Mode	What It Does	When It Activates
The Mirror	'Here is exactly where you stand across all three pillars vs. your real peers.'	Day 0. Immediately. This is the hook.
The Diagnosis	'Here is specifically what is holding you back — and the root cause, not just the symptom.'	Week 1-2. After full profile completion.
The Prescription	'Here is the single highest-leverage action you can take this week, ranked by impact divided by effort.'	Ongoing. Every Monday. One action. No overwhelm.

The two behavioural science principles that drive every action prompt are: (1) Loss framing — 'You are losing Rs.18,000/year by staying in this job' is 2x more persuasive than 'You could earn Rs.18,000 more.' (2) Social norms — 'The average person at your salary bracket saves 22%' changes behaviour more than any financial education.

5.2 The Six Financial Elevation Levers

Lever	The Intervention	Sample Action Prompt
The Earning Gap	Salary is the biggest financial lever — but most Indians never negotiate.	'You are 28% below market rate for your role in Bengaluru. Your negotiation anchor is Rs.X. Here is your data-backed script.'
Savings Automation	Automated savings deliver 30% more saved per month vs. manual.	'Set up one Rs.5,000 SIP on payday — before you spend. 4 minutes. Tap to set up now.'
The Insurance Void	One hospitalisation without cover = 3-5 years of savings wiped out.	'A Rs.1Cr term plan costs Rs.683/month at your age. This eliminates your biggest financial risk. Compare in 3 minutes.'
The FD Trap	Savings account yields 2.5-3.5% vs. 5-6% inflation. Real returns are negative.	'Your Rs.2.4L in savings lost Rs.7,200 in real value last year. A liquid MF would have earned Rs.14,400. Move in 3 taps.'
Debt Sequencing	Multiple EMIs cause paralysis. Wrong paydown order costs thousands.	'Pay credit card (24% interest) before personal loan (14%). This sequencing saves you Rs.22,000 over 18 months.'

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

Retirement Reality	74% save 1-15% of salary. 43% want to retire by 55.	'At your current rate, you retire at 71. To retire at 52, you need Rs.18,400/month saved. Here are 3 ways to close the gap.'

5.3 The Five Career Elevation Levers

Lever	The Intervention	Sample Action Prompt
Salary Negotiation	The single highest-ROI career action most Indians never take.	'You haven't negotiated in 19 months. Market rate moved up 18%. Your window is now. Here is your negotiation script.'
Skill-to-Salary Map	84% upskill with no guidance on what the market rewards.	'AWS cert moves you from 44th to 71st percentile within 18 months — based on 2,340 professionals like you.'
Company Ceiling Detector	Being in the wrong company type structurally limits salary growth.	'IT services professionals earn 31% less at Year 7 than peers who moved to product companies at Year 3-4. You are in Year 5.'
Visibility Gap	Strong performers without external presence get systematically overlooked.	'Your LinkedIn completeness: 43%. Top performers at your level have 4x your connection count. Here is the exact headline to use.'
Promotion Timing Signal	Knowing when to ask is as important as knowing what to ask for.	'The optimal window to initiate your promotion conversation is 5 weeks from now. Professionals who do this are 2.7x more likely to receive it.'

5.4 The Dual-Elevation Moments — Where the Real Magic Happens

These are moments where a single action improves BOTH the financial score AND the career score simultaneously. These are the highest-conviction recommendations LifeScore makes — treated as events, not just notifications.

The 5 Dual-Elevation Moments

1. SALARY IS YOUR BIGGEST FINANCIAL LEVER

Career action: Negotiate or switch. Financial impact: Rs.4.2L/year = Rs.42L compounded over 10 years.

Insight: 'No SIP strategy will ever outperform closing your Rs.4.2L salary gap. Do this first.'

2. ONE CERTIFICATION, TWO PAYOFFS

Career action: AWS / PMP / CFA cert. Cost: Rs.12,000-40,000.

ROI: Salary increase of Rs.3-8L annually within 18 months. Higher than any MF at your current balance.

3. YOUR FINANCIAL STRESS IS COSTING YOU CAREER MOMENTUM

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

Signal: Stress score 7+/10 for 8+ weeks AND EMI ratio above 45% AND no salary growth in 18+ months.

Insight: 'Your financial anxiety is suppressing your career velocity. Fix the finance first. Here is the one move.'

4. THE RIGHT TIME TO SWITCH IS THE RIGHT TIME TO INVEST

On job switch: salary bumps Rs.3-5L. Redirect Rs.12,000 of that increase into SIP on Day 1 of new job.

Impact: Rs.1.2Cr additional retirement corpus over 20 years from one automated decision.

5. UPSKILLING VS. DEBT PAYDOWN — THE RIGHT SEQUENCE

Scenario: Rs.1.4L loan at 16% AND skill gap costing Rs.2.8L/year in forgone salary.

Insight: 'Pay the loan first (4 months). Then certify. The sequencing saves you Rs.28,000 net.'

5.5 The Weekly Elevate Experience

The primary Elevate interface is a 60-second Monday morning brief. Never more than one financial action and one career action at a time. The score moving upward — even by 2 points — is the dopamine loop. Not streaks. Not calorie counts. Your actual life getting measurably better.

Sample Weekly Brief

Good morning, Rahul. Your LifeScore this week: 63 (+2 from last week — health improved)

THIS WEEK'S ONE MOVE: Career
Your appraisal window opens in 5 weeks.
You are 28% below market rate for your role.
Start your negotiation prep now.
-> [Build My Negotiation Case]

Last week's move: SIP of Rs.5,000 set up [DONE]
Impact: Financial score +3 points

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

06 The 1-Month MVP Plan

One full-stack dev, Next.js web app, all 3 pillars from Day 1

6.1 The Governing Principle

The MVP North Star

Do not build a full product in 1 month. Build a demo that feels like a product.

Goal: In under 5 minutes, show someone something true about their life that they did not know — and tell them exactly what to do about it.

The One Number That Tells You If Month 1 Worked:
% of users who complete the quiz AND voluntarily share their score on WhatsApp.
Target: 20%+. If you hit this, you have product-market fit in the making.
If you don't, the score isn't surprising enough — and that is the one thing to fix in Month 2.

6.2 Platform Decision: Next.js Web App

One dev can ship frontend + backend in the same codebase. No App Store delays. WhatsApp-shareable via link — India's #1 distribution channel. Vercel deployment is free and instant. Mobile-responsive, so it works perfectly on every phone. Convert to React Native in Month 3 once validated.

6.3 The MVP Architecture: 4 Screens, 1 Flow

The Complete User Journey in Month 1

SCREEN 1 — LANDING
Scrolling ticker of real-feeling peer insights. Three pillar chips showing the full vision.
Single CTA. No sign-up. 'No sign-up needed. 2 minutes. Free.'

SCREEN 2 — THE QUIZ (10 questions, ~2 minutes)
One question at a time, full screen. All taps, zero typing. Auto-advances on chip selection.
Covers all 3 pillars. Progress bar visible throughout.

SCREEN 3 — THE SCORE (The revelation moment)
Animated ring counter. Three percentile bars that fill on load.
Peer context line personalised to age/city/salary/industry.
'Biggest opportunity' card identifying the weakest pillar automatically.
Loss-framed language: not 'you could do better' but 'people like you are doing 2.3x better right now.'

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

SCREEN 4 — THE ACTION PLAN
Three cards: Finance, Career, Health. Each with a red flag, a win, and one specific action.
ActiveMatch section: 3 real venue recommendations for the user's city with match scores.
Phone number capture at the bottom — the conversion moment, earned after value delivered.

6.4 The 10 Quiz Questions

#	Question	Pillar	Input Type	Why We Ask
1	How old are you?	About You	Slider 22-55	Cohort formation
2	Which city do you live in?	About You	Dropdown — 20 cities	Peer group + ActiveMatch geography
3	Monthly in-hand salary?	About You	Range chips (6 bands)	Financial + Career benchmarking
4	What % of salary do you save/invest?	Finance	Range chips (5 bands)	Savings rate percentile
5	Do you have term life insurance?	Finance	Yes / No	Biggest single financial risk flag
6	EMIs as % of salary?	Finance	Range chips (4 bands)	Debt burden score
7	What industry do you work in?	Career	Chips (6 industries)	Career salary lookup table
8	Years of work experience?	Career	Slider 0-25	Career velocity calculation
9	Average sleep per night?	Health	Slider 4-10 hrs	Sleep percentile + ActiveMatch timing
10	Exercise days per week?	Health	Chips (4 bands)	Fitness percentile + ActiveMatch suitability

Critical design rule: all inputs are ranges and sliders — never exact numbers. Nobody types their exact salary into an app they just opened. Range chips get 90% of the accuracy with 10x the completion rate.

6.5 The Scoring Engine (Scoring Rubric for Month 1)

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

The scores don't need ML in Month 1. They need a well-designed rubric that feels credible and surprising. Here is the skeleton:

Score	Input	Points Logic
Financial (0-100)	Savings rate	<5%=5pts, 5-10%=15, 10-20%=28, 20-30%=38, 30%+=48
Financial (0-100)	Term insurance	No=0, Not sure=5, Yes=22
Financial (0-100)	EMI burden	40%+=0, 20-40%=8, <20%=16, None=22 — max 92, normalise to 100
Career (0-100)	Salary vs. cohort	Lookup table: industry x city x YoE -> median range -> percentile -> 20-80pts
Career (0-100)	Career velocity	YoE vs. seniority signals — Behind=10, On track=15, Ahead=20 — max 100
Health (0-100)	Sleep	<5hrs=5, 5-6hrs=12, 6-7hrs=22, 7-8hrs=34, 8hrs+=42
Health (0-100)	Exercise	0 days=5, 1-2days=15, 3-4days=30, 5+days=42 — max 84, normalise to 100
LifeScore	Combined	Finance x 38% + Career x 35% + Health x 27%

6.6 What We Explicitly Don't Build in Month 1

Feature	Why We Skip It
AA Framework / bank account linking	Trust hasn't been earned yet. Manual input is fine for V1.
Full AI coaching / Elevate mode	Needs data history. Build after 90 days of user data.
Wearable sync (Fitbit, Apple Health)	Complex integration, low MVP priority. Manual input works.
Google Maps live venue data	Use pincode lookup table. Maps API in Phase 2.
Job board / direct apply	Partnership complexity. Link out to existing platforms for now.
Social feed / community	Distraction from core value. Build in Year 2.
Android + iOS app	Launch web first. Validate. Convert in Month 3.
Hindi / regional languages	English first. Vernacular in Phase 2 (Months 4-6).

6.7 The 4-Week Sprint

Week	Focus	Key Deliverables

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

Week 1	Data & Logic	Scoring engine. Salary lookup table (50 role types x 10 cities x 5 YoE bands = 2,500 data points). ActiveMatch venue table (10 cities x 5 activity types = 50 venue clusters, manually curated). Postgres DB setup.
Week 2	The 4 Screens	Quiz UI (one-question-at-a-time). Score display with animated percentile bars. Action plan with dynamic content. Wire scoring engine to quiz outputs. Phone OTP via Firebase Auth.
Week 3	The Hooks	WhatsApp share button + OG image auto-generation for shareable score card. Returning user dashboard (OTP login -> see score). Analytics (PostHog — track quiz start -> complete -> score viewed -> action clicked -> phone entered).
Week 4	Test & Launch	20-person in-person beta: sit with users, watch them take the quiz, note every moment of confusion or delight. Fix everything. Performance: page load under 2 seconds on mobile data. Deploy to Vercel. Soft launch: personal network + r/IndiaInvestments + LinkedIn.

6.8 The 5 Metrics That Decide If Month 1 Worked

Metric	Target	What It Tells Us
Quiz completion rate	>70%	Is the 10-question onboarding frictionless enough?
Score screen -> phone number conversion	>30%	Does the revelation screen earn the contact?
WhatsApp share rate	>20% of completers	Is the score surprising enough to be worth sharing? This is the PMF signal.
Day 7 return visit	>25%	Is the product sticky enough to survive the first week?
Beta user quote: 'Did this feel true?'	>80% yes	Is the scoring rubric credible? If no, fix the rubric before adding any feature.

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

07 5-Year Product Roadmap

From mirror to life coach to life OS

Year 1 — The Mirror (2026)

Establish the core benchmarking product. Acquire first 150,000 users. Prove people will share sensitive personal data in exchange for genuine insight.

Quarter	Key Milestones	User Target
Q1 2026	Next.js MVP live. All 3 pillars. 10-question quiz. WhatsApp share mechanic. Soft launch Bengaluru + Mumbai tech community.	10,000
Q2 2026	React Native mobile app. Professional Score deep-dive. First B2C revenue via premium tier. ActiveMatch with Maps API integration.	50,000
Q3 2026	Wearable sync (Apple Health + Google Fit). Full LifeScore Elevate (weekly brief + one-action system). Score history graph.	100,000
Q4 2026	AA Framework integration for automatic financial data. Employer B2B pilot (5 companies). Tier 2 city expansion. Series A raise.	150,000

Year 2 — The Advisor (2027)

Move from showing users their score to recommending specific financial and health products. First B2B revenue stream. Target: 500,000 users, Rs.5 Cr ARR.

- LifeScore Marketplace: recommend right SIP, term insurance, health insurance based on individual gap analysis
- ActiveMatch full launch: gym and studio booking integration (Cult.fit, Gold's, Anytime Fitness partnerships)
- Elevate AI Coach: weekly check-in that evolves recommendations based on score changes
- Employer Dashboard B2B: aggregate anonymised workforce data sold to HR teams at Rs.200/employee/month
- Apollo, Practo, Navi Health partnerships for preventive health diagnostic referrals
- City-level insight reports: 'Mumbai Financial Health Index', 'Bengaluru Career Velocity Report'

Year 3 — The Coach (2028)

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

Real-time coaching, community features, deeper data integrations, NRI edition. Target: 2,000,000 users, Rs.25 Cr ARR.

- Peer Groups: anonymous comparison communities (e.g. '28-year-old Bengaluru engineers') with community forums
- HR system integration: Darwinbox, Keka for automatic professional data updates
- NRI Edition: benchmarking for Indian diaspora in UAE, USA, UK, Singapore vs. home country peers
- Mental Health Score: validated PHQ-9 / GAD-7 assessment with professional referral pipeline
- School & College Edition: career readiness and financial literacy benchmarking for students

Year 4 — The Platform (2029)

LifeScore becomes a platform that third parties plug into. Target: 5,000,000 users, Rs.80 Cr ARR.

- LifeScore API: third-party integrations for fintech apps, insurance underwriting, lending (LTV/CAC signals)
- LifeScore for Doctors and Dietitians: patient health benchmarking tool for preventive care consultations
- LifeScore for Financial Advisors: client onboarding and benchmarking dashboard (replaces manual intake)
- Government partnerships: PMJAY, NPS, Ayushman Bharat data integrations

Year 5 — The Life OS (2030)

LifeScore becomes the single source of truth for an individual's life trajectory. Target: 10,000,000 users, Rs.200 Cr ARR. IPO-ready.

- Predictive Modelling: 'At your current trajectory, here is where you will be at 40, 50, 60'
- Life Events Engine: automated recalibration for marriage, children, job loss, health diagnosis
- LifeScore Passport: portable, consent-based score used for loan applications, insurance quotes, job applications
- Every Indian knowing their LifeScore the way they know their Aadhaar number

(c) 2026 LifeScore. All rights reserved. Strictly Confidential. Do not distribute without permission.

08 Business Model

Six revenue streams, 20x LTV/CAC

Revenue Stream	Description	Year 1 Target	Year 3 Target
Freemium B2C	Basic scores free. Deep insights, history, Elevate actions = Rs.299/month or Rs.1,999/year	Rs.50L	Rs.8 Cr
Marketplace Commission	5-15% referral fee on SIP, term insurance, health insurance recommended by the app	Rs.80L	Rs.6 Cr
ActiveMatch Referrals	Gym and studio partners pay Rs.200-500 per converted trial. Equipment affiliate commissions.	Rs.40L	Rs.4 Cr
B2B Employer Dashboard	Rs.200/employee/month for anonymised aggregate workforce data	Rs.30L	Rs.6 Cr
Health Diagnostics	Apollo, Practo, Navi pay per appointment booked via red flag triggers	Rs.20L	Rs.3 Cr
API Licensing (Yr 4+)	Fintech lenders, insurers, HR platforms license the LifeScore benchmark engine	—	Rs.3 Cr

Unit Economics Target — End of Year 2

CAC (Cost to Acquire Customer): Rs.120 via referral loops and organic content

ARPU (Average Revenue Per User): Rs.480/year (blended free + paid)

LTV (Lifetime Value): Rs.2,400 (5-year avg retention at current churn models)

LTV / CAC Ratio: 20x — extremely capital efficient

Primary growth engine: WhatsApp share mechanic (zero CAC) + employer B2B referral (paid acquisition amortised over contract)

09 Data Strategy

Where benchmark data comes from and how it gets better

9.1 Public and Aggregated Data Sources (Month 1)

- SEBI mutual fund data — household investment patterns by income and city tier
- EPFO provident fund data — salary and contribution benchmarks across industries
- ICMR-INDIAB study — India-specific BMI, diabetes, and metabolic risk data by age and region
- RBI household finance survey — savings, liabilities, and insurance penetration by cohort
- AmbitionBox and 6figr — salary data via scraping and API partnerships (the salary lookup table)
- NSSO and Census data — demographic and economic baseline by city and income bracket
- Manual curation — 50 fitness venues across 10 cities for the ActiveMatch launch table

9.2 The User Data Flywheel

Every user who inputs their data makes the benchmark more accurate for everyone else. More users -> richer peer cohorts -> more accurate benchmarks -> better insights -> more users. Benchmark scores are only computed at cohort level — minimum 50 users per cohort before that cohort is shown to a user. No individual data is ever identifiable.

9.3 Privacy and Compliance

- Full DPDP Act (India's Digital Personal Data Protection Act 2023) compliance from Day 1
- AA Framework (Account Aggregator) for bank data — user-consented, RBI-regulated — introduced in Year 2
- Zero data selling — LifeScore never sells individual user data to third parties. Ever.
- Data portability — users can export or delete all their data at any time in 2 taps

10 Why Now

Six macro tailwinds making 2026 the inflection point

Tailwind	What It Means for LifeScore
AA Framework is live	RBI's Account Aggregator system allows consented, secure financial data sharing. The technical infrastructure for Pillar 1 now exists and is regulatory-approved.
Wearable explosion	India's smart wearable market growing at 17.8% CAGR. Tens of millions of Indians now have sleep and fitness data sitting in Apple Health or Fitbit — ready to pipe into LifeScore.
UPI financial awareness	400M+ UPI users are now comfortable with digital finance. The trust barrier for sharing financial data with apps has structurally collapsed.
Post-COVID health anxiety	Indians are acutely aware of lifestyle disease risk. Preventive health is no longer niche — it is mainstream middle-class anxiety. The demand for health intelligence is at an all-time high.
AI cost collapse	Cost of generating personalised AI insights has dropped 90% in 3 years. A product like LifeScore Elevate was not economically viable in 2022. It absolutely is in 2026.
Government tailwind	India's Economic Survey 2025-26 explicitly called for AI-driven platforms to map health and financial patterns across the population. Regulatory alignment, not resistance.

11 Risks & Mitigations

The honest view of what could go wrong

Risk	Mitigation
Data privacy backlash	DPDP compliance from Day 1. Zero data selling pledge. Transparent methodology. AA Framework (RBI-regulated) used instead of screen scraping.
Scoring feels inaccurate / unfair	Always show source and methodology. Allow users to flag cohort data. Build reputation for honest, uncomfortable truths. Beta with 100+ users before public launch.
Low willingness to share sensitive data	Start with simple 10-question quiz (no login). Build trust before asking for detailed data. Referral mechanic incentivises sharing. Phone number only asked after value delivered.
Large tech competitor copies the idea	Move fast. The data flywheel is the moat — first mover advantage compounds with every user who inputs data. Start building the dataset from Day 1.
Regulatory risk on financial recommendations	Obtain SEBI RIA registration for Phase 2. Partner with licensed distributors initially rather than distributing directly. Legal review before Marketplace launch.
Gym / studio partners don't convert	ActiveMatch recommendation quality is the lever — warm, pre-qualified leads should convert at 3-5x industry standard. Pilot with 3 gyms in Bengaluru before scaling partnerships.
Scoring rubric is wrong in early months	The beta testing protocol (ask every user 'did this feel true?') is the correction mechanism. Rubric is designed to update rapidly based on early user feedback.

12 A Note to My Co-Founder

Why I think we should build this together

If you're reading this, it's because I believe you have what it takes to build this alongside me. Let me be direct about what this requires:

What We Need	Why It Matters for LifeScore
Product intuition for Indian consumers	LifeScore will win or lose on UX. The benchmarking insight must feel like a revelation, not a spreadsheet. Someone needs to obsess over this.
Data and engineering depth	The scoring engine and data flywheel are the core IP. We need someone who can build and own the benchmark infrastructure long-term.
Go-to-market instinct for India	Distribution in India is unique — WhatsApp virality, vernacular content, community seeding, influencer trust chains. This is not a US playbook.
Comfort with ambiguity at speed	We are building the scoring rubric with imperfect data in Month 1. We need people who can ship, learn, and improve fast — not wait for perfection.

The Opportunity in One Paragraph

500 million working-age Indians. Zero products that tell them the full truth about where they stand in life. A technical infrastructure that finally makes it possible.
A cultural obsession with comparison that guarantees demand.
A business model with 20x LTV/CAC and six distinct revenue streams.
A 5-year path to becoming India's most trusted personal data platform.

LifeScore is not a nice-to-have. It is the product that India's middle class has needed for a decade and never had.

The MVP takes 4 weeks. The moat takes 5 years. Let's start.
